PaperSonar complete warehouse relationships

PK primary key FK foreign key UK alternate key ? nullable Arrows run from referenced table to child table

Fact measures: publication_count = 1, author_count, reference_count; snapshot cited_by_count and observed_count = 1.

Citation is factless. Its numeric result is a count of distinct relationship rows. Bridge allocation_weight supports fractional counting.

Lineage FKs, omitted from connectors: dim_work.loaded_run_id, fact_publication.loaded_run_id, fact_work_snapshot.loaded_run_id, and fact_citation.last_seen_run_id all reference etl_run.run_id. Attributes and SQL types are listed on the physical sheets.
